

Press release

Mail server protection by Kaspersky integrated in the Univention App Center

bitbone AG develops a Kaspersky app especially for Univention Corporate Server

The proven protection for Linux mail servers by Kaspersky is now available for Univention Corporate Server (UCS) through the Univention App Center. bitbone AG adapted the Kaspersky solution so that it can easily be installed and put into operation through the App Center.

Bremen / Würzburg, 05th August 2014. In the course of a collaboration, both bitbone AG and Univention GmbH (www.univention.com) provide the Kaspersky mail security as an app for the Univention App Center for UCS, and within this scope UCS customers are even offered technical support.

The Kaspersky security for mail server app protects e-mails on UCS mail servers. All proven and known functions such as the multi-layer cloud-based spam filter are contained in the app. The spam filter works real-time and it is possible to filter undesired messages. This way, data traffic can be reduced considerably. A further special feature of the Kaspersky mail security solution is a stable anti virus engine, within a method to reduce server resources (load balancing). Because of the possibility to exclude certain objects from being scanned, the system's performance is maintained and the required resources for the anti virus scan are minimized by the Kaspersky mail security app.

The app was exclusively developed for UCS, and therefore it is available only through the Univention App Center. It can be installed without any problem through the UCS administration interface. After the installation through the Univention App Center each potential customer is offered the possibility to test the Kaspersky mail security app for free for 30 days before acquiring it. In the end the required licenses, correspondingly to the number of users, can be bought from bitbone AG.

“We've always watched with interest the development at Univention. At the suggestion of our long-term business partner Kaspersky, some time ago, we had discussions about how we could

offer UCS customers the possibility to access Kaspersky products“, said Thomas Sprickmann, member of the executive board of bitbone AG, about the collaboration with Univention. “Our deep know-how about Linux and good contacts to both Kaspersky and Univention made it possible to adapt to UCS very fast. The Kaspersky mail security app for UCS is just the beginning. We are already thinking about new offers for the Univention App Center.”

“With the solution of Kaspersky in the App Center, we now have the first app in the area of security and anti virus. This theme is perceived by the users more than ever. We've always received specific enquiries for the Kaspersky solution from our customers, and now we value to know bitbone as a partner who for many years is extremely experienced in the Linux area, and who not only provided the solution for the deployment with UCS but who also optimized it“, said Peter Ganten, CEO at Univention, about the new Kaspersky mail security app in the Univention App Center.

About Univention

Univention is a leading supplier of Open Source products for the operation and management of IT infrastructures. The core product is Univention Corporate Server (UCS), a flexible, cost-efficient and successful alternative to server solutions from Microsoft. UCS includes comprehensive Active Directory functions and an App Center to integrate and operate enterprise applications.

UCS allows web-based IT management and is well suited for organizations of any size, either as a classic server solution, in the cloud or in hybrid IT environments. UCS is designed to operate as part of existing Microsoft infrastructures and supports the easy replacement of Microsoft Windows domains.

With Univention Corporate Client, which is based on UCS, Univention provides a management solution for Ubuntu and with UCS@school a complete system for the operation and management of IT in schools. Univention has a worldwide partner network and subsidiaries in Europe and North America.
